

General information

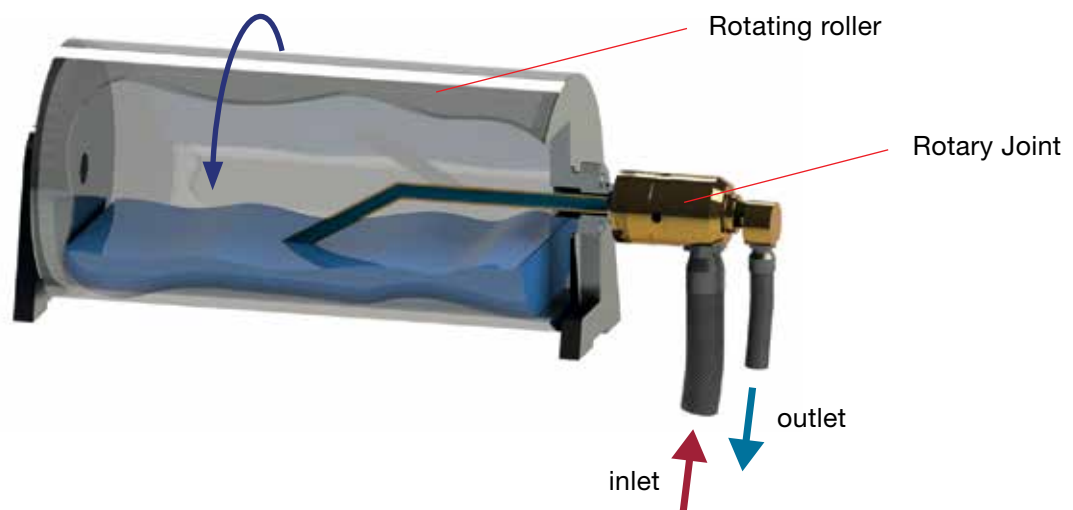

Product groups

Rotary Joints, Multiport Joints and Swivel Joints

Use

Rotary Joints and Swivel Joints are for conveying liquids or gases into or out of rotating or swivelling assemblies of machines or installations.

Function

Fields of use

- cooling rollers
- heating rollers
- feeding of heating medium into drying devices
- cleaning equipment
- supply of actuators on rotating portals
- cooling of furnace rollers
- calenders and extruders
- feeding of media to heated or cooled mixers, kneading machines, cookers, grinders, pelletisers, screw conveyors, etc.
- moving pipelines

Media

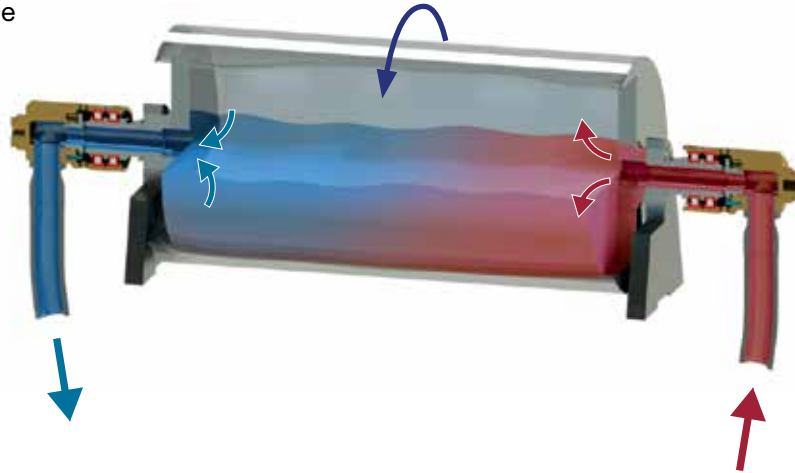

- water
- steam
- air
- heat transfer oils
- hydraulic oils
- non-toxic gases
- and many more

Use / constructive possibilities

Rotary Joints can be used for single feeding or drainage of the medium (single flow) or with combined feeding and drainage (double flow).

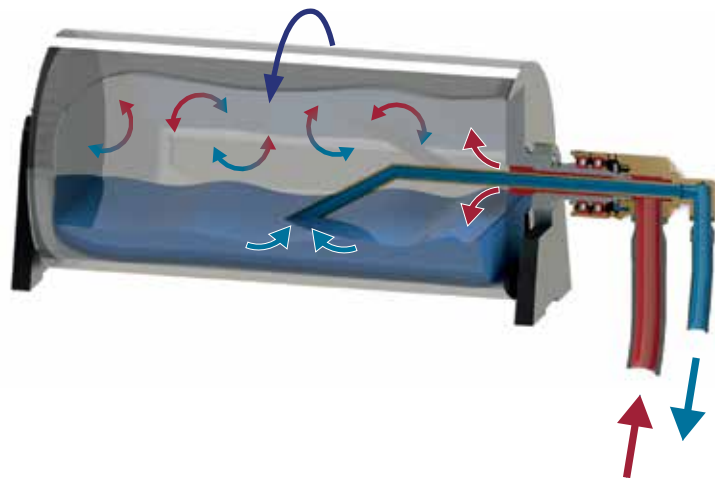

Single flow

Single feeding or drainage

Double flow

Combined feeding and drainage / stationary internal pipe

Double flow

Combined feeding and drainage / rotating internal pipe
